

YANTRA CONSULTING PVT. LTD.

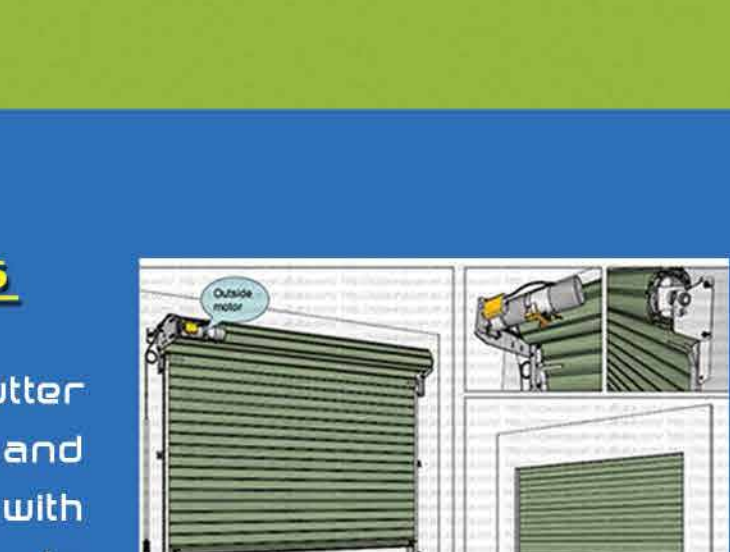

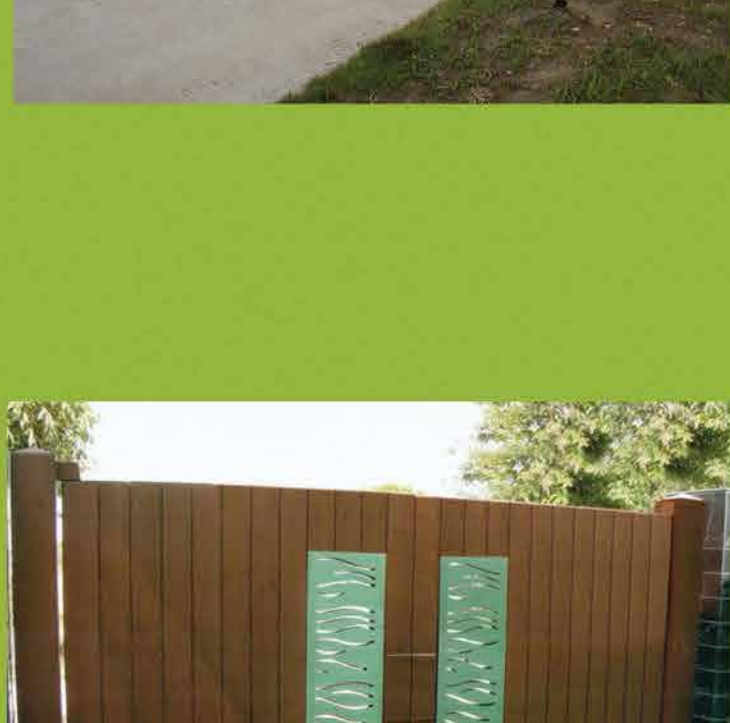

About Us:

Yantra Consulting has zeal for constant improvement and growth by delivering Economical and Robust solutions focused upon the needs of the end user. We can provide Customized solutions in Entrance Automation, Entrance Security, Surveillance and Parking Management for Residential and Heavy traffic Commercial locations such as Corporate Offices, Industries, Hotels, Gated communities and Shopping centers.

GATE AUTOMATION

Automated gate enables you comfortable and convenient access to your home at the click of a button. a click on the remote control, your gate open. It's quick and easy and no need to leave your vehicle to open your gate is locked automatically in the closed position, preventing unwanted entry into your property.

Intelligent safety system is active during gate movement and reacts when an obstacle is detected. optional battery backup can selected for using your automatic gates even during a power cut. yantra consulting provides customized automation of light and heavy gates for both residential & industrial usage.

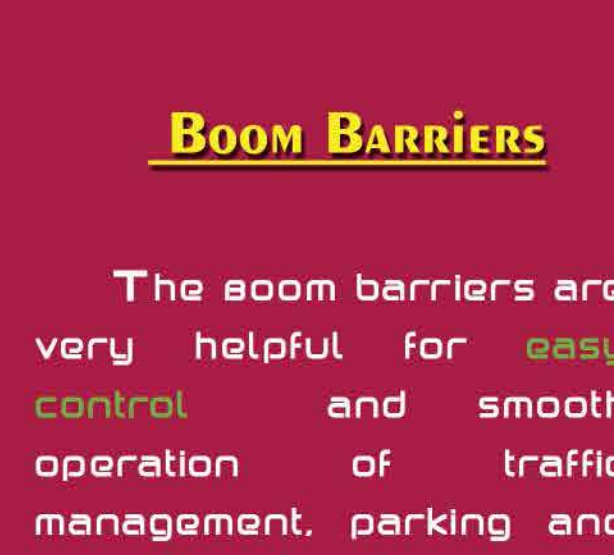

Rolling Shutters

An automated rolling shutter provides peace of mind and enhances your lifestyle with advanced locking system to protect and secure your home and business establishments with press of a button.

Drapery Automation

We are a one stop shop for customized automation for all kinds of curtains and blinds automation for various environments such as homes, offices and auditoriums.

BOOM BARRIERS

The boom barriers are very helpful for easy control and smooth operation of traffic management, parking and security at entrance and exit points.

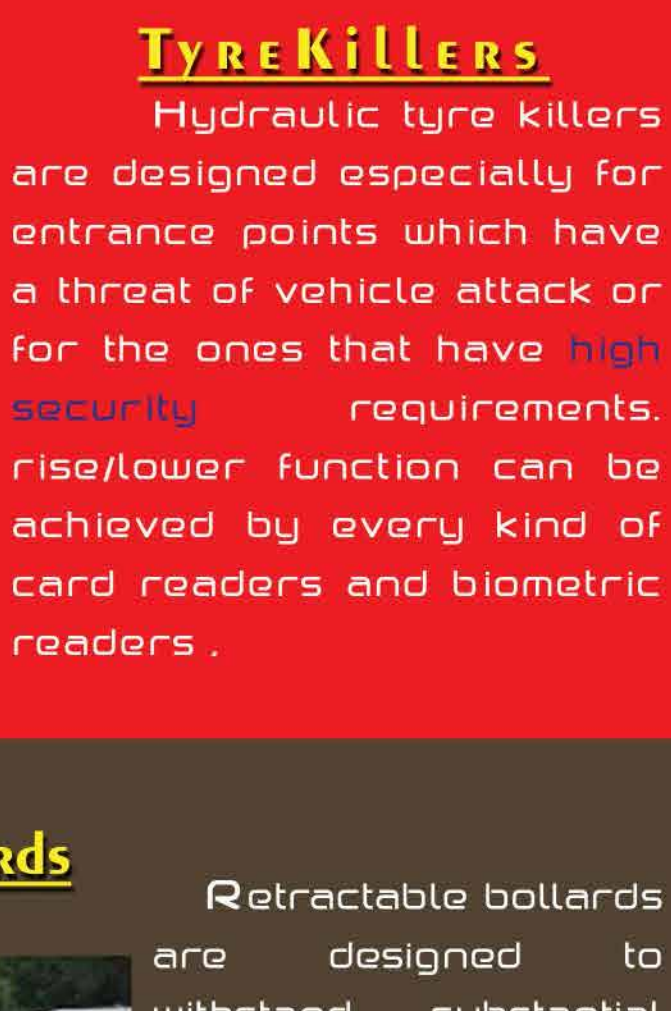

Yantra provides boom barriers in various dimensions and with superior quality. further, they can be synchronized to the toll collection system, mechanical parking system & card access system.

Crash Rated Barrier

Crash rated barriers are electro hydraulically operated barriers to stop intrusions of vehicles. unlike the normal swinging automatic boombarriers which aren't able to resist even small impact loads, these can withstand static impact loads of various ranges. they can be used at entry / exit points of high security premises against unauthorized access and aggressive attacks.

TyreKillers

Hydraulic tyre killers are designed especially for entrance points which have a threat of vehicle attack or for the ones that have high security requirements. rise/lower function can be achieved by every kind of card readers and biometric readers.

Bollards

Retractable bollards are designed to withstand substantial direct impact forces hence used as anti-intrusion security for sensitive sites, buildings, embassies and private residences.

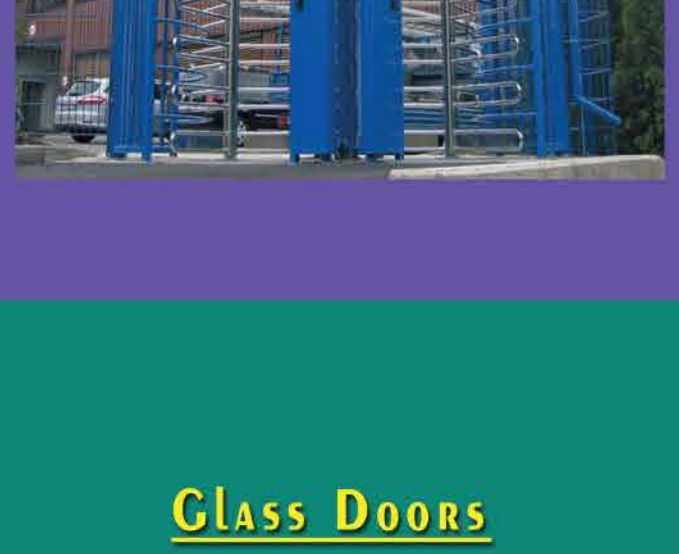

they can also be applied for delimiting an area, access to a company or housing lots preserving the comfort and quality of life in the determined areas, respecting aesthetics of historical places and heritage monuments and ensuring pedestrian safety.

Retractable bollards are available in both hydraulic and pneumatic versions. access controllers for bollards allow management and operation of several bollards simultaneously or singularly.

Road Blocker

Motorized platforms, in general called road blockers, includes a wide selection of items with different characteristics of mechanical strength and dimensions, to meet all market requirements. they are used for maximum protection of sensitive areas and defence organizations. The road blockers use hydraulic movement and there are many optional items to configure each individual system.

TURNSTILE & FLAP BARRIERS

Turnstile allows only one person to pass at a time, thereby from a business standpoint gives an accurate, verifiable count of attendance and prevents unauthorized access. turnstiles are used at a wide variety of settings, including stadiums, amusement parks, mass transit stations, office lobbies & airports.

Full - height turnstiles

The full-height turnstile is a larger version of the turnstile, commonly 7-feet high, similar in operation to a revolving door, which eliminates the possibility of anyone jumping over the turnstile.

GLASS DOORS

Automatic sliding door systems provide convenience and flexibility for effortless access without contact with the door.

We will provide state-of-the-art technology combined with safe, dependable and high-performance door systems for every building, whether for installation during its construction or for retro-fitting.

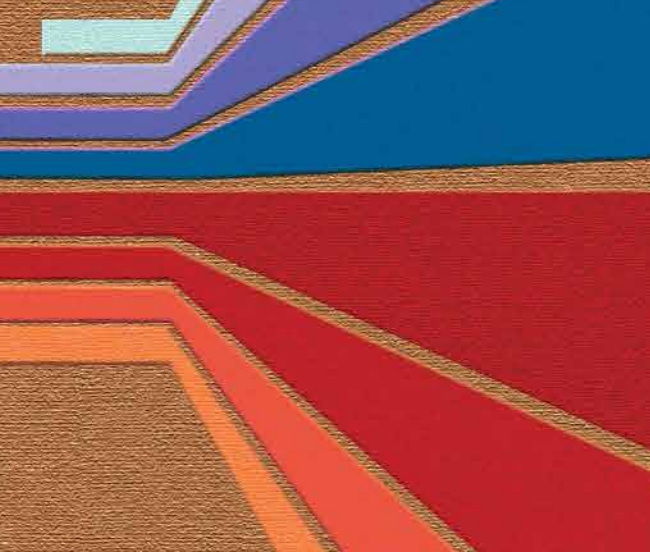

RFID ENTRY SYSTEM

Integrated with automatic identification and modern management RFID door entry system effectively improves the remote monitoring capabilities of access control making the system simple to use and easy to maintain widely applied in intelligent buildings, offices, hotels and sensitive locations.

CCTV Solutions

Yantra provides CCTV solutions that meet our clients' requirements. we can provide anything from analogue to fully integrated IP systems.

SOLAR FENCE

Solar electric fences consist of wires that carry pulses of electric current to provide a non-lethal shock to deter potential intruders. tampering with the fence also results in an alarm that is logged by the security electric fence energiser and can also trigger a siren.
